DETAILED ACTION

Election/Restrictions

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claims 18-24, 27-30, 48-54 and 57-64, drawn to a method and computer readable medium containing a program for segmenting an input video sequence, classified in class 382, subclass 232.
 - II. Claims 25, 26, 55 and 56, drawn to a method and computer readable medium containing programs for determining a similarity between first and second frames in an input video sequence, classified in class 382, subclass 168.
 - III. Claims 65-72, drawn to calculating a degree of visual changes in a video shot, and calculating an evenness of color distributions in a video shot, classified in class 382, subclass 236.

The inventions are distinct, each from the other because of the following reasons:

2. Inventions in Group II and Group I are related as combination and subcombination.

Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because the combination (Group II) does not contain a limitation for segmenting an input video sequence into a plurality of video shots according to a computed similarity. The subcombination has separate utility such as a method for segmenting an input video sequence into a plurality of video shots.

Art Unit: 2623

3. Inventions in Group II and Group III are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct from each other if they are shown to be separately usable. In the instant case, invention II has separate utility such as a method for determining a similarity between a first frame and a second frame in an input video sequence, and invention III has separate utility such as methods of calculating a degree of visual changes and an evenness of color distributions in a video shot. See MPEP § 806.05(d).

4. Because these inventions are distinct for the reasons given above and the search required for Group I is not required for Groups II or III, restriction for examination purposes as indicated is proper.

5. Because these inventions are distinct for the reasons given above and the search required for Group III is not required for Groups I or II, restriction for examination purposes as indicated is proper.

6. A telephone call was made to Mr. Frank L. Bernstein on December 8, 2004 to request an oral election to the above restriction requirement, but did not result in an election being made.

7. Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even if the requirement is traversed (37 CFR 1.143).

8. Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).

Claim Objections

Art Unit: 2623

9. Claims 49-54, 56, 57 and 61 are objected to because of the following informalities: these claims are directed to a computer readable medium, but all depend from method claims (18-22 and 25). It appears that these claims are duplicates of those that depend from the method claims but the dependencies were not updated when they were copied. Appropriate correction is required.
